

# Simulated Basketball Training System

Checkpoint preparation record

|                            |                                                                                                                           |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Draft scene</b>         | Simulated Basketball Training System                                                                                      |
| <b>Unity scene path</b>    | Assets/Simulated Basketball Training System.unity                                                                         |
| <b>Repository</b>          | <a href="https://github.com/LeonardEZLi/LeonardLi_EZPZ_Project">https://github.com/LeonardEZLi/LeonardLi_EZPZ_Project</a> |
| <b>Current interaction</b> | First-person navigation, basketball pickup, and throwing                                                                  |
| <b>Landmarks</b>           | Indoor court, two baskets, court markings, seating, and scoreboard                                                        |

## Submission evidence

**Playable WebGL link:** Publish the WebGL build to Unity Play or itch.io, then enter the public URL in the final submission copy.

**Unity Scene view screenshot:** Capture the completed court from Unity's Scene view pane after checking the layout, then insert it in the final submission copy.

**Repository access:** Confirm that the repository is public, or share the private repository with Matt (AVataRR626).

## Before submitting

1. Open the draft scene in Unity and run it to confirm first-person navigation and basketball interaction.
2. Build for WebGL using Unity Build Profiles and publish the resulting build.
3. Paste the published WebGL link into the document and insert the Unity Scene view screenshot.
4. Push the scene, physics material, README, and document to the repository, then verify repository access.
